

Small Spaces, Smart Solutions:

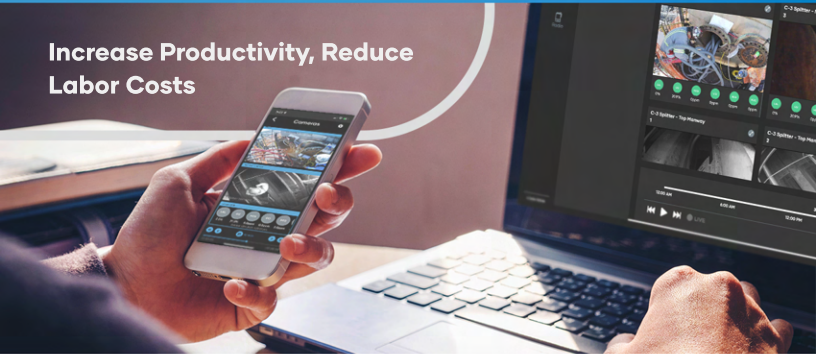

Digital Confined Space Management with weavix™

Experience innovative solutions for your confined space management needs with weavix™. We've reinvented the way confined space management should be done with flexible, purposeful software solutions to keep your workforce productive, connected and protected.

Software-Centric Confined Space Management

END-TO-END SOLUTIONS FOR EVEN THE MOST ISOLATED AREAS, NO SEMIS OR CRANES REQUIRED

weavix™ reinvented confined space management to work remotely without sacrificing safety or productivity for your crews. We are the industry's least-invasive confined space management system, creating a network of synchronized digital communications and information between your workers and our Flexible Command Center, all directly from your confined spaces. Within our secure platform, weavix™ grants individualized monitoring privileges from any device with wi-fi to any user based on permission-level access, making it possible to monitor and protect your workers whether you're on or off-site.

Increase Productivity, Reduce Labor Costs

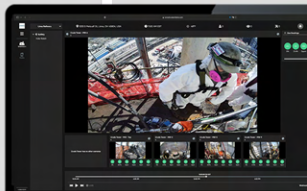

Flexible Command Center

Rather than bring in cranes and semis to install huge, expensive, invasive infrastructures - and transform your facility into a construction site - skip it with the weavix™ Flexible Command Center. We've made your command center fully digital, allowing you access to all your data and information in real-time from any device with a wi-fi connection. Monitor confined spaces with live video feeds, read more gases than ever before, analyze the entry and exit times per individual, all while on the go. With global access, whether you're on or off-site, weavix™ gives you complete access to our secure platform, based on user-level permissions, and releases you from a fixed command center.

Live, Continuous Video Feed

MONITOR YOUR CREWS WITH ABSOLUTE CERTAINTY

- ✔ 4 live video transmissions for every wilma™ confined space management assistant.
- ✔ 360-degree surveillance technology with atmospheric readings to comply with OSHA standards.
- ✔ All video feeds are synced and archived for live or playback viewing.

Monitor up to 8 Gases

Identify almost double the number of gases of other confined space management systems. In any confined space, a sudden change in the atmosphere can have a drastic, and sometimes dangerous, effect on your workers inside. Real-time atmospheric and gas monitoring within the confined space ensures faster response and a safer workplace for your crews when working, but some systems are limited to monitoring up to only 6 at a time. For added safety precautions, it's possible to monitor up to 8 toxic or flammable vapors, such as hydrogen sulfide, carbon monoxide and oxygen, automatically with weavix™.

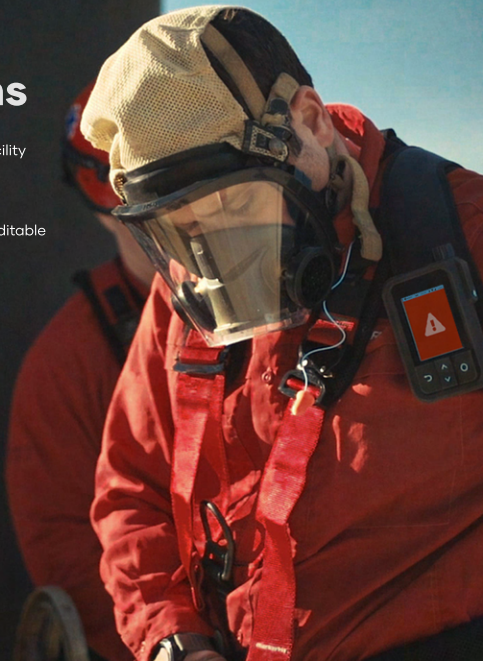

Fatigue Management

ACCURATE & AUTOMATIC ENTRY & EXIT LOGS

More visibility within your confined spaces allows for more opportunities for workforce optimization. Our accurate digital time logs for entering and exiting a vessel measures productivity levels on an individual basis and provides insight into how the atmospheric conditions affect your workers, all while keeping you in compliance with federal and state safety regulations. All available in our Flexible Command Center, time tracking technology by weavix™ helps minimize time within confined spaces and allows you to visualize the conditions your frontline is working in while in the confined space, keeping your workforce productive and protected at all times.

Mass Alerts & Notifications

- ✔ Target specific geofences or full facility in case of emergency with visual & audible alerts.
- ✔ Confirm acknowledgement with audible receipt records.
- ✔ Confirm muster locations & arrivals

wilma, the Confined Space Management Assistant

FEATURES

 40 lbs Portable Weatherproof Backpack Carry-On Case

 Multiple Port Options for Cameras or Antennas
• 4 Cameras • 4 USB Ports • 1 HDMI Port

 Varied Network Availability Including:
Wi-Fi, Global PLTE, Public LTE & Bluetooth

 Power with Existing Electrical, 100 Amp Hour Battery,
or Solar Power

 Internal & External Intercoms

Network Extender

Extends network connections into confined or remote spaces, providing a Wi-Fi hotspot for digital connectivity.

Real-Time Gas Readings

View atmospheric readings from any device of entrants & confined space. Set alert ranges for an unlimited number of different gases.

Non-Invasive & Portable

Portable & noninvasive setup that can be deployed by a single attendant in a matter of minutes for a short-term confined space or long-term Turnaround project.

Audible & Visual Alerts

Every wilma provides live alerts to workers by flashing signals and loud hailers.

Live Video

Provides live video of manway & workers inside the space that can be viewed from anywhere on any mobile device.

Digital Entry & Exit Logs

Compiles digital entry & exit logs in real-time and keeps archived records that can be reviewed for historical information.

Mobile & Web Dashboards

Set specific KPIs that can be managed via dashboards from any mobile device from anywhere on the globe.

Communicate To & From Command

Each wilma has internal and external visual intercom that allows communication to and from the flexible command center.

All-in-One Digital Confined Space Management System

weavix™ reinvents confined space management for the modern age of industry. wilma™, our autonomous confined space management assistant, brings all the capabilities you need into one, non-invasive, easy-to-carry device, that connects all your confined spaces into one Flexible Command Center. Along with real-time gas monitoring and live video feeds, wilma™ wirelessly connects to all weavix™ smart radios to build a network of connectivity, no matter where your workers are. Confined space management is simple, compliant and safe when you partner with weavix™.
