

TECHNICAL RESCUE TEAMS

HIGH ANGLE & CONFINED SPACE

PROFESSIONAL • MOTIVATED • HIGHLY-TRAINED • DRIVEN

PK Safety provides on-site rescue teams along with standby rescue teams for immediate deployment.

PK Safety employs Technical Rope Rescue Teams certified in Ropes I and II, Confined Space I and II, Emergency Medical Technicians, and many other certifications pertaining to emergency services, rescue, and industrial safety.

Our rescue personnel is retained year-round, so you can be assured that you are receiving highly trained, motivated, and committed Technicians.

When not assigned to a field job, our rescue crews maintain continuous training (100+ hours annually), both hands-on and classroom, to maintain their efficiency and professional competence.

PK Safety standby rescue teams know that each second counts. All our rescue technicians are trained in case management, and all rescue teams come with an EMT-trained team member. PK Safety hires first responders – military, EMTs, police, and fire. Our highly-trained rescue personnel completes four times the required number of hours annually and continually receive training. Whether someone on your team needs a confined space rescue or a high-angle rescue, you can count on us.

Technology also plays a key role in the rescue services we provide, including the digitization of our rescue plans and the use of wilma™, our confined space monitoring technology, to provide continuous gas monitoring and live video feed from inside the confined space.
